Here's what aged care staff have to say...

*"I think it's exciting. It's great when there's something **NEW**"*

*"I think we all experience that there's **NO HARM** done"*

*"It's good that it's **QUIET**...It's good for the old people as well"*

These comments about **Kradal™** flooring were extracted from a study which involved interviewing enrolled nurses at an aged care home in Sweden.

kradal™
FLOORING

An innovative solution for injury prevention
Manufactured by Classic Coachworks Pty Ltd

Kradal™ flooring is a trademark of Classic Coachworks Proprietary Limited
14A Hearne Street, Mortdale, 2223, NSW, Australia.
Copyright© 2021. All rights reserved.

Why choose Kradal™?

Unlike other injury-prevention strategies such as wearing hip protectors or participating in regular exercise programs, Kradal™ works passively, requiring no extra effort from already hardworking residents or nurses.

Kradal™ is one of the only impact absorbing flooring solutions that has been tested in an aged care home.

Implementation of Kradal™ has been shown to prevent the loss of quality-adjusted life-years for residents while reducing costs associated with falls.

Installing Kradal™ at an aged care home in Australia may also make it eligible for additional accommodation supplements.

What is Kradal™?

Kradal™ is an impact absorbing flooring system that significantly reduces the impact force of falls and thereby reduces the risk of fall-associated injuries.

The multi-layered design consists of an impact absorbing underlay bonded to a vinyl surface finish of your choosing. The underlay is made of a novel patented polyurethane technology with outstanding shock absorbing properties.

Additionally, Kradal™ not only protects people, but it also protects the environment. The flooring is 100% recyclable with 10% of its total composition being sourced from renewable plant based materials.

Falls in the Elderly

1 in 3 Australians aged

65 and above in residential aged care experience **a fall every year.**

Falls are the **leading cause of injury** in this age group.

The annual growth of healthcare costs for falls

indicates that **existing injury-prevention interventions are not sufficient** to care for

the ageing population.
